

# NEW PRODUCT

## "Air Bullet" Blow Gun

Acme's new push-to-activate blow gun makes blowing out lines, pipes and other hard-to-reach areas easy. Air flow is started when the tip is pressed against a surface. Only one hand is needed and the necessary force is minimal. Air flow stops when the user pulls the blow gun away. The rubber tip won't mar a surface and the tip's shape is ideal for small-diameter spaces.

Air is released when the tip is pressed against a surface.

### FEATURES AND BENEFITS

- Easy to operate and maneuver – simply push the tip against a surface to activate air flow.
- Enables user to utilize air to clean and blow out lines.
- When used with an extension, blowing out hard-to-reach areas is no longer a challenge with the gun's push-to-activate design.
- When used without an extension, the knurled body makes this gun easy to grip and hold.
- The rubber tip won't mar surfaces and the tip's shape is ideal for small diameter cylindrical-type objects (tubing, lines, etc.).
- Activation force is less than 4 lbs. so only one hand is required and minimal push force is needed to initiate air flow.
- Can be also used as a regular blow gun by pulling back on the nozzle with one hand to activate air flow.

### APPLICATIONS

- Blow fluids and clogs out of transmission or fluid lines.
- Clear out heat exchangers and equipment using piping or tubing.

### SPECIFICATIONS

Pressure rating: . . . . .125 PSI  
 Operating temperature: . . . . .32° - 175° F  
 Material  
   Body: . . . . .Nickel-plated brass  
   Nozzle and "O" Ring: . . . .Buna-N  
 Length: . . . . .3"  
 Diameter: . . . . .3/4"  
 Weight: . . . . .0.165 lbs.  
 Input Port: . . . . .1/4" NPT
